

Alberto Andrés Valdés González.

Degree: Mathematical Engineer.

Work position: Data Scientist.

Mail: anvaldes@uc.cl/alberto.valdes.gonzalez.96@gmail.com

Location: Santiago, Chile.

Installing Libraries

There are mainly 4 ways of installing libraries:

1. Using pip or conda:

For example for pandas we can execute the next commands in the terminal:

```
pip install pandas==2.7.0
```

```
conda install pandas==2.7.0
```

2. Using file .whl:

Here we have to use the next command:

```
pip install some-package.whl
```

3. Using github

Here we have to use the next command:

```
pip install git+https://github.com/jkbr/httpie.git
```

4. Modifying github repository

First we have to clone the repository through the next command:

```
git clone https://github.com/jkbr/httpie.git
```

Next we have to modify the repository and finally we can install the library:

```
sudo python setup.py install
```
