

Alberto Andrés Valdés González.

Degree: Mathematical Engineer.

Work position: Data Scientist.

Mail: anvaldes@uc.cl/alberto.valdes.gonzalez.96@gmail.com

Location: Santiago, Chile.

Comparison of Models

As we saw previously we have mainly 4 type of models:

- Harmonic Regression
- SARIMAX
- Prophet
- Neural Networks

Starting from this we have the **next conclusions:**

- i. Always is better predict in short term than long term. For this we have to collect data and retrain the model regularly.
 - ii. Neural Networks is not the ideal model for Time Series prediction.
-
